

COZAD!

CUSTOM BUILT TRAILERS
"THE FINAL WORD IN HEAVY HAUL"

COZAD TRAILER SALES, LLC, IS PLEASED TO ANNOUNCE THE ACQUISITION OF Sturdy~Weld and Alloy. Operations will be centrally located at Cozad's manufacturing facility in Stockton, California. Cozad purchased Sturdy~Weld and Alloy Trailer brands on March 12th 2010. Cozad along with these other brands will now be able to offer one of the widest varieties of vocational product lines in the market today. Keep watching for more brands to come!

Alloy has served the vocational market by designing and manufacturing the highest quality trailers in the Chip industry. Alloy has earned a reputation for producing quality products that outlast the competition, and for delivering personalized customer service. Using state-of-the-art manufacturing technology and patented innovative designs. Our chip vans, as well as the rest of our products are - and will continue to be - developed to meet the specific requirements of our customers.

"We are confident that Cozad, Sturdy~Weld and Alloy products will surpass your expectations, add to your bottom line, deliver the kind of service and durability that will make you a lifetime customer. We stand behind every weld, machine cut and coat of paint. Delivery dates represent a promise by us and we unconditionally guarantee your satisfaction."

Since the acquisition of Alloy Trailers earlier this year by the Cozad Corporation, the Cozad design team, in cooperation with existing users, has made significant improvements to the Alloy Chip Trailer product line. All the new Alloy Chip Trailers feature a new and improved perimeter frame, reinforced and strengthened top rail, cross member system and a steel rear door frame as well as many other upgrades. All of these upgrades have been accomplished without any increase in tare weight because of our use of the most advanced materials available throughout, making the trailer light weight. The trailers will be produced principally in a 53 foot, quad axle configuration with running gear tailored to the customer's requirements. Tri and tandem axle configurations will also be available. Standard unit: Quad axle, 53 foot, 102 width and a height of 13.6

Contact Cozad for "Alloy" and "Sturdy~Weld" parts and service.
