

Dual Lane Modular Trailer Configuration

The Dual Lane Modular Trailer System is designed for maximum versatility and fleet utilization.

Versatility

- **The Dual Lane Modular Trailer System is designed for maximum versatility and fleet utilization.**

- Interchangeable deck, jeep, and rear configurations allow the trailer to be adapted to a wide range of hauling requirements without the need for a dedicated trailer for every application. Deck styles can be changed as needed, and jeep and rear sections can be swapped between the available configurations offered to suit specific job requirements. In addition, the deck system is compatible with our 9-Axle/13-Axle Heavy Duty (5" Deck Pins) Steerable configuration, further extending cross compatibility across the fleet and improving overall equipment utilization. This Modular design gives operators greater flexibility, reduces equipment redundancy, and allows the system to grow with changing hauling demands.
